To assemble the Spinner® Ride, follow the steps in the order listed in this assembly guide. For more product information, visit us at www.precor.com.

**WARNING** At least two people are required to assemble the equipment. DO NOT attempt assembly by yourself.

**Assembly Requirements**

When assembling the bike, we recommend you:
- Assemble the equipment close to where you plan to use it.
- Assemble the equipment on a solid, flat surface, so that it remains level and stable.
- Leave a minimum of 0.5 m (19.7 in.) on at least once side of the bike and 0.5 m (19.7 in.) behind or in front of the bike.

**Hardware Kit**

**Begin Assembly**

Remove the following parts from the packaging: handlebar assembly, hardware kit, stabilizers, product documentation, seat assembly, and spare parts.

**CAUTION** Damage to the bike during assembly is not covered by the Precor Limited Warranty. During assembly, you must protect the handlebar and seat adjustment pop-pins from damage.

**To attach the rear stabilizer:**
1. Stand the bike frame on its front end (toward flywheel) and place a piece of foam under the bike frame (Figure 1) to protect the handlebar adjustment pop-pin from damage.
2. Attach the rear stabilizer to the frame using two bolts 1 and two washers 2 (Figure 2). Using a hex key 2, tighten to 15.6 ft-lb (21.2 N-m).

**To attach the front stabilizer:**
1. Stand the bike frame on its back end and place a piece of foam under the bike frame (Figure 3) to protect the seat adjustment pop-pin from damage.
2. Attach the front stabilizer to the frame using two bolts 1 and two washers 2 (Figure 4). Using a hex key 2, tighten the bolts to 15.6 ft-lb (21.2 N-m).
3. Return the bike to the upright position.
To level the Bike

**Important** Place the equipment on a flat surface. Rotating the adjustable feet does not compensate for extremely uneven surfaces.

Make sure the bike is level before allowing anyone to use it.

To level the bike:
1. Try to rock the bike. If there is any movement, tip the bike to one side to locate the adjustable feet (Figure 13).
2. Correct the height of each adjustable foot by turning it clockwise (+) to lower the bike, or counterclockwise (-) to raise the bike.
3. When you are finished leveling the bike, recheck for movement and readjust as necessary.

Attach the Pedals

Hold the pedals with the toe straps facing forward.

To attach the pedals:
1. Insert a pedal into its corresponding crank arm (Figure 11).
2. Use a rubber mallet to lightly tap the center of the pedal into the crank arm to seat it (Figure 11).
3. Secure the pedal using one bolt (Figure 12) and torque to 33 ft-lb (45 N-m) with a hex key.
4. Repeat Steps 1-3 to attach the other pedal.

Level the Bike

**Important** Place the equipment on a flat surface. Rotating the adjustable feet does not compensate for extremely uneven surfaces.

Make sure the bike is level before allowing anyone to use it.

To level the bike:
1. Try to rock the bike. If there is any movement, tip the bike to one side to locate the adjustable feet (Figure 13).
2. Correct the height of each adjustable foot by turning it clockwise (+) to lower the bike, or counterclockwise (-) to raise the bike.
3. When you are finished leveling the bike, recheck for movement and readjust as necessary.

Bike Assembly Checklist

Use this checklist to make sure your bike is assembled properly.

- Check that all bolts are tightened to proper torque specification and no parts are missing.
- Check that the seat post moves freely and locks in different positions.
- Check that the seat is level and does not rotate or tilt. Tighten and adjust as needed.
- Test the seat for movement front to rear.
- Brake tension is adjustable by turning the resistance knob in the front of the seat. Pressing down on the knob will apply the brake if you need to stop quickly.
- Pedal the bike at a moderate pace and test the resistance knob for smooth resistance changes.
- Press down on the knob to ensure the bike stops quickly.

Once testing is complete, tip the bike forward using the handlebars and roll it on a smooth surface to its final use location. If required, level the bike.
